

MEASURING INSTRUCTIONS FOR CUBICLE TRACKS

When planning the design of your cubicle track:

- Always view the track as if you are looking down from the ceiling (architectural view)
- Be aware of obstructions such as light fixtures, vents, fire sprinklers
- Review cubicle track diagrams for examples of typical track layouts. Use any one or combination of these to create your own layout

When ordering cubicle track:

- Specify shape of each track and the measurement for each section of track.
- It may be necessary to fax a rough sketch of your layout so that we can bend the track properly to fit your application.
- Indicate the quantity desired.

Please note:

- Standard bends are 90 degrees or 45 degrees.
- Track is curved on 14" radius. Custom bends are available on request.
- Oversized tracks may be cut for shipping.
- Splicers will be supplied.

90° Bend L-Shape Track

Note:

Always measure full length of the leg as if the track were square. The factory will make allowance for the bend.

Proper measurement is critical to ensuring your new cubicle track works for your space. Follow the steps and call us at 1-800-725-3266 if you need assistance.
